Profile Summary

Software Engineer with hands-on experience building production-grade REST APIs using Node.js and Spring Boot. Designed and shipped live backend covering JWT authentication and versioned database schema migrations. Comfortable across the full backend stack: API design, authentication, SQL/NoSQL databases, Docker, and CI/CD.

Projects

MockMate - Career Coaching Platform | *Java, Spring Boot, Next.js, PostgreSQL, Flyway, Clerk* [GitHub](#)

- built 10+ REST endpoints following Clean Architecture with modular layers (controllers, services, repositories, DTOs, mappers), reducing coupling and improving testability.
- Built stateless JWT authentication using Clerk-issued tokens, a custom `JwtAuthFilter`, and JWKS key rotation on the Spring Security 6 filter chain, securing all protected routes.
- Wrote unit tests with JUnit5 and Mockito against the service layer, isolating business logic from persistence and external API dependencies.
- Integrated Google Gemini API for four AI features: ATS resume scoring, cover letter generation, mock interviews, and industry trend summaries; managed schema evolution across six tables with Flyway on cloud-hosted (Neon) PostgreSQL.

EduTrack - Image Based Recognition Attendance System | *Node.js, Express.js, MongoDB, MTCNN, Docker* [GitHub](#)

- Built a full-stack attendance system connecting MTCNN/FaceNet inference pipelines to the backend via REST, achieving 92% face-recognition accuracy with sub-500ms response times under live load.
- Designed a three-tier RBAC system (Admin, Faculty, Student) with fine-grained permission logic, cutting manual attendance recording time for a 60-student cohort by approximately 80%.
- Secured the application with stateless JWT and bcrypt password hashing; wrote Postman automated test suites with zero unauthorized-access incidents across testing.

Learning Adventure - Gamified AI-Literacy Platform | *Next.js, TypeScript, SQLite, Docker, Zod* [GitHub](#)

- Architected a full-stack learning platform with a typed repository layer over SQLite serving 8 missions, 40 quiz questions, and 24 flashcards across 5 difficulty tiers via 20+ REST endpoints.
- Integrated an LLM tutor (Groq API) with a deterministic mock-fallback provider that guarantees 100% uptime demoability on missing key, timeout, or rate limit, powering inline mission help, free-form Q&A, and automated quiz-answer explanations.
- Built a passcode-gated admin CMS with full CRUD for content management, Zod-validated request schemas on every route, and server-side enforced publish/enable gating so unpublished content stays unreachable even via direct URL.
- Containerized the application with a multi-stage Docker build and a custom entrypoint script that seeds the database on first run only, preserving state across container restarts via a persisted volume.

Technical Skills

Languages: Java, TypeScript, JavaScript

Backend Frameworks: Spring Boot, Spring Security 6, Hibernate/JPA, Node.js, Express.js

Databases & Cloud: PostgreSQL (Neon), MongoDB

Testing & Tools: JUnit5, Mockito, Postman, Docker, Git/GitHub, Maven, Flyway, Swagger/OpenAPI 3.0, GitHub Actions, Linux

Core CS: Data Structures & Algorithms, OOP, System Design fundamentals

Experience

OctaNet Services Pvt. Ltd.

July 2024 – November 2024

Software Engineer Intern

Remote

- Shipped REST API endpoints in Node.js/Express.js for core product features, with `express-validator` input validation and structured error handling.
- Implemented JWT + bcrypt authentication; designed and executed edge-case Postman test scenarios covering invalid tokens, expired sessions, and concurrent logins.
- Optimized MongoDB schemas with compound indexes, cutting average query response time by 35% on high-traffic endpoints.

Education

Sri Balaji College of Engineering & Technology

August 2021 – July 2025

B.Tech in Computer Science — CGPA: 8.3/10

Jaipur, Rajasthan
